The Shuttle Radar Topography Mission (SRTM) digital elevation data was used to create this topographic map. The map depicts various geographical features such as rivers, contours, trails, and roads. The map projection information includes the Universal Transverse Mercator (UTM) Zone 49N and World Geodetic System 1984 (WGS 84) projection. The data is supported by the European Union and implemented by CIRAD and partners. The map shows the topographic of Kapuas Hulu, West Kalimantan, with elevation classes ranging from 0-25 m to >1800 m. The project was supported by the European Union and implemented by CIRAD and partners.
